INSTRUCTIONS FOR USE

All instructions on how to run the
project are in one of the following links:

GitHub
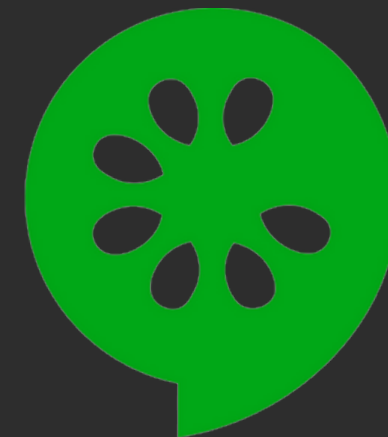

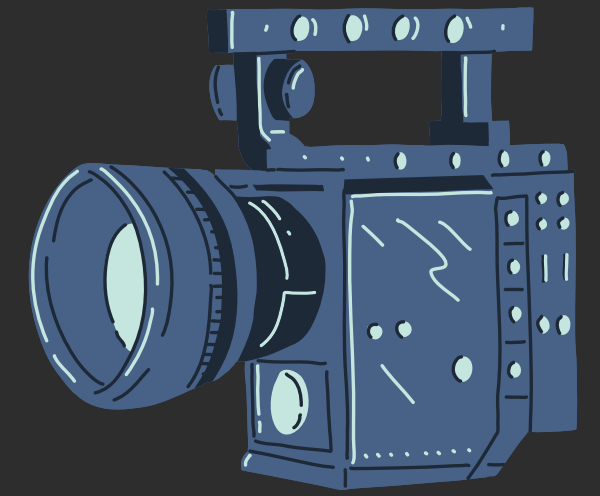

GitLab

TEST REPORT

The test report of the cucumber tests can be accessed through this link:
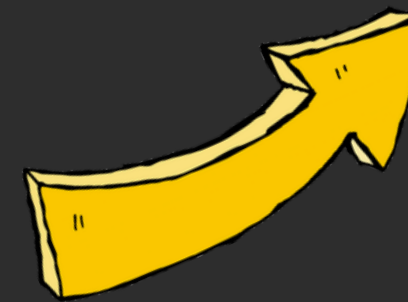

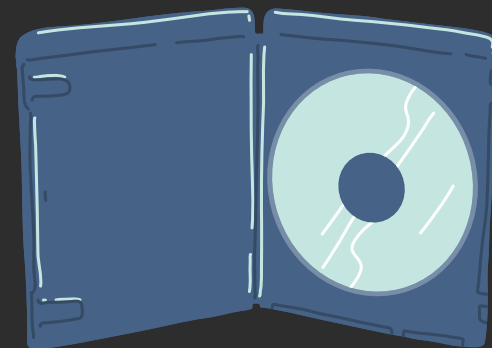

Cucumber Report

WHAT IS THE PROJECT

It is a REST application to create your own catalog of movies and series. You can give a personal score and save the show in the database. It is also possible to list all shows watched, filter movies and series, update your personal score and also delete a show
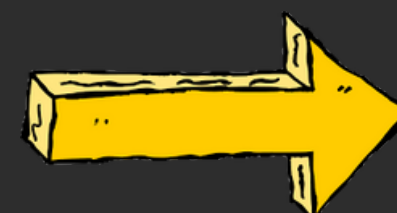

**MySql Database**

HOW IT WORKS

Access through REST

My Catalog

Through REST access the user can register Tv Shows in the database

OMDB API

Before adding any new show the OMDB API is consulted to verify if the show actually exists

MAPPING

POST a new show: localhost:8080/show

GET all shows: localhost:8080/show

GET all movies: localhost:8080/show?type=movie

GET all series: localhost:8080/show?type=series

GET a show by id: localhost:8080/show/id

PATCH a show: localhost:8080/show

DELETE a show by id: localhost:8080/show/id

Swagger UI

THANK YOU FOR LISTENING!
